Full-Stack Software Engineer with 2+ years of professional experience in React.js, Next.js, Node.js/Express.js. Proven expertise in RESTful API development, optimizing system performance and reducing resolution times. Build scalable, user-centric applications that solve complex problems through clean, efficient code. Proficient in collaborating across cross-functional teams to deliver high-impact software solutions within Agile environments.

EDUCATION

University of Engineering and Technology (UET), Lahore *Sept 2020 – June 2024*
BSc (Hons.) Computer Science

TECHNICAL SKILLS

Languages & Frameworks: React.js, Next.js, TypeScript, Node.js, Express.js, NestJS, Python, REST Framework
Databases: SQL, MongoDB
Tools & Platforms: Git, GitHub, VS Code, Postman, Vercel, Docker
Concepts: REST API Design, State Management, OOP, MVC Architecture, Data Flow Optimization

PROFESSIONAL EXPERIENCE

Associate Software Engineer, Metalabs Tech *Apr 2025 – Present*

- Improved cross-departmental attendance-tracking efficiency by architecting a full-stack Attendance Management System using React.js, Node.js, and Express.js, replacing manual spreadsheet-based tracking.
- Reduced API response latency by designing and implementing RESTful endpoints in Node.js/Express.js, enabling real-time client-server data synchronization.

Software Engineering Intern, Arbisoft *Jan 2025 – Mar 2025*

- Delivered full-stack features under sprint deadlines by developing React.js front-end components integrated with a Django backend, using Agile/Scrum workflows.

Freelance Full-Stack Developer, Self-Employed (UK Clients) *Feb 2024 – Dec 2024*

- Delivered custom full-stack web applications for multiple UK-based clients using the MERN stack (React.js, Node.js, Express.js, MongoDB), managing requirements, development, and delivery independently.
- Managed end-to-end client communication, timelines, and revisions across independent contract engagements, delivering production-ready features on schedule.

PROJECTS

Smart City Complaint & Utility Management System *Next.js, NestJS*

- Reduced complaint resolution time by 40% by designing an end-to-end lifecycle-tracking platform with automated status updates and utility bill management.

HR Attendance Management System *React.js, Node.js*

- Streamlined attendance and leave management by building role-based access control (admin/employee) with RESTful APIs and database-backed report generation.

Restaurant Ordering System *React.js, Django*

- Enabled end-to-end order processing by building a full-stack system with a React front-end and Django REST back-end, supporting real-time menu and order management.

Bore Log Data Extraction & Processing *Python, Donut Transformer (ML)*

- Reduced manual data-extraction time by 70% by engineering an automated Python pipeline using the Donut Transformer model to process 50+ geological bore log documents, eliminating manual OCR review.
