AHMAD ZAYAB

Lahore, Pakistan | +92 322 784 7489 | ahmadzayab2003@gmail.com | linkedin/ahmadzayab | git/ahmad-zayab

PROFESSIONAL EXPERIENCE

Associate Software Engineer | **Metalabs Tech** *Mar 2025 – Present*

- Architected and developed a full-stack Attendance Management System using React.js and Node.js, improving employee tracking efficiency across departments.
- Designed and built RESTful APIs with Node.js and Express.js, enabling seamless client-server communication and reducing API response latency.
- Developed a Smart City Complaint & Utility Management System for resident complaint submission, lifecycle tracking, and utility bill management to improve service transparency and efficiency.

Software Engineering Intern | **Arbisoft** *Jan 2025 – Mar 2025*

- Developed dynamic, full-stack web applications using React.js and Django, delivering full-stack features within tight deadlines.
- Developed and integrated RESTful APIs using Python (Django REST Framework), enabling efficient data exchange between front-end and back-end services.

EDUCATION

BSc (Hons.) Computer Science *Sept 2020 – June 2024*

University of Engineering and Technology (UET), Lahore

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, TypeScript, Tailwind CSS
- **Backend:** Node.js, Express.js
- **Databases:** SQL, Firebase, MongoDB
- **Tools & Platforms:** Git, GitHub, VS Code, Postman, Agile/Scrum
- **Concepts:** State Management, API Integration, Data Flow Optimization, OOP, MVC Architecture

PROJECTS

Restaurant Ordering System — *React.js, Django*

- Built a full-stack web application for managing restaurant menus and processing customer orders, with a React front-end and Django REST back-end.

Smart City Complaint & Utility Management System — *Next.js & NestJS*

- Designed a platform for residents to submit complaints and track their status through the complete lifecycle until resolution.
- Implemented utility bill tracking and service management features to improve transparency and streamline city service operations and reduce complaint resolution time by 40% through automated lifecycle tracking .

HR Attendance Management System — *React.js & Node.js*

- Built a web-based system for tracking employee attendance and managing leave requests with role-based access for admins and employees.
- Developed RESTful APIs and integrated a database to handle authentication, attendance records, and report generation efficiently.

Bore Log Data Extraction & Processing — *Python, Donut Transformer (ML)*

- Developed an automated Python pipeline leveraging the Donut Transformer model for intelligent extraction of geological bore log data, significantly reducing manual processing effort and improving data accuracy.
- Reduced manual data extraction time by 70%, processing 50+ bore log documents
